

Mambo Gasket Installation

- 1) The small holes on the top of the gasket must be facing upward towards the entrance of the gasket socket when the Mambo gasket is fully installed.
- 2) Apply a thin layer of an approved pipe lubricant that has no deteriorating effects on the gasket material, to the outside of the Mambo gasket.
- 3) Install the Mambo gasket into socket by turning the gasket to approximately 45 degrees and pushing the gasket to the bottom of one side of the socket locking a portion of the opposite side of the gasket into the gasket race (See Photo)
- 4) With your fingers on each side of the gasket pull up on the portion of the gasket that is positioned at the bottom of the socket. The Mambo gasket will snap into place. Check that the gasket is seated properly; it can be re-positioned slightly with a flat blade screwdriver. (See Photo)
